

TIME FOR SCHOOL!

Kids who come to our summer camp are around the age of 8-9, when they already started going to school. They enter the Concrete Operational stage according to Piaget and they compete with Industry vs. Inferiority, according to Erickson. This is the stage where they will feel helpless/discouraged and become increasingly dependent on the adults, if their academic skills are not explored and achieved. Moreover, they have to start living with rules to obey.

"HELP!" provides team activities to teach the kids how to cooperate with peers and rules. It also offers tutoring sessions for reading, math, and science, which are taught in fun and easily understandable manners. By the time the summer camp ends, kids will become competent in their abilities.

PICNIC

After an intense session of sport and studying, our summer camp provides a grand picnic at the near park. It's a special treat for the kids as they always try their best and work hard.

There will be foods, games, and swimming. Small rewards are given to the children because it is crucial to compliment them in what they achieved since it will build their confidence and help them grow their self-value.

WORK

OPPORTUNITY FOR KIDS

HELP!

Rafting

Rafting is a great team activity not only for the unity of the kids but also for the hot, steamy summer. There are two major components in which they can learn through rafting. One of them is the collaboration of the kids while rowing the raft; they need to work together in order to advance. They'll learn each other's value and teamwork. Moreover, the kids have to follow several safety rules while rafting. Therefore, rafting is the perfect way for these kids to learn both cooperation and rules and to become satisfied with their abilities.

Dodgeball

Dodgeball is the second team activity for the kids to enjoy. In between the tutoring sessions, they'll play dodgeball to relax and take a break from learning.

Dodgeball also lead to cooperation with peers as it involves passing the balls and targeting the opponents. More importantly, however, are the rules that follow with the game. This is the ultimate activity that will teach the kids about adhering to the rules.

ACADEMIC HELP!

Our tutoring session includes three major subjects: reading & writing, math, and science. For each subject, activity is designed to improve their academic potentials and to have some fun while studying.

READING & WRITING

Every day, the kids will read a short story and write a brief summary with their opinions about it. Then, in groups, they'll choose a scene and act it out. They enhance their language art abilities through their own creative skits.

MATH

Most kids get bored with math. However, at our camp, their opinions will change; they'll learn that math is actually fun. Games involving cards and dice and songs about math formulas not only improve their arithmetic skills but also provoke fun for the kids.

SCIENCE

Science can be a difficult subject for kids. Nevertheless, through several simple yet cool experiments, they'll understand the concepts faster as they'll physically observe and participate in these experiments.

SPECIAL NOTICE & CONTACT INFO.

If you want our tutors to give lessons to your kids in the future (after the camp), it is possible to arrange the sessions. So for more information, contact us:
